IPC Global Solutions Upgrades Technical Facilities

Taunton, MA, April 15th, 2013 - *IPC Global Solutions* has recently upgraded its technical facilities in Taunton, MA in support of their expanding efforts in filtration product management. In addition to new floors, new paint, and upgraded lighting, IPC has added new test capabilities with a full flow oil filter test stand, a hot oil soak test machine, and a color viewing station. The all new test equipment is capable of impulse testing, burst testing, high pressure hot oil product evaluation, and packaging color confirmation against color draw downs.

IPC's upgraded facilities are in addition to existing capabilities in hydrostatic burst testing, bubble testing, compression set testing for rubber components, and regulator valve opening pressure validation. IPC continues to build on its on-site technical expertise in packaging design, printed packaging color validation, oil filter thread confirmation, dimensional analysis, durometer analysis, and color matching.

"Our upgraded technical facilities provide more of the key tools needed to successfully support a complete filtration product line," says Martin Ambroz, Product Manager at IPC Global Solutions. "These new capabilities give IPC a distinct advantage in product management and packaging design for the filtration market."

IPC Global Solutions, headquartered in Taunton, MA is a leader in the private label filter business. With a 35 year heritage of supporting the very best names in the filter business, IPC has built its success on delivering quality and service to customers all around the world.
